HAY STOCKS

Dry hay stored on Minnesota farms as of May 1, 2015, is estimated at 720 thousand tons, an increase of 64 percent from May 2014. Disappearance from December 1, 2014 – May 1, 2015, totaled 2.33 million tons, down 15 percent from the 2.74 million tons for the same period a year earlier.

All hay stored on United States farms May 1, 2015, totaled 24.5 million tons, up 28 percent from a year ago. Disappearance from December 1, 2014 - May 1, 2015, totaled 67.5 million tons, compared with 70.1 million tons for the same period a year earlier.

May 1 hay stocks levels were record-lows in Connecticut, Massachusetts, Pennsylvania, Rhode Island, and Vermont.

May 1 hay stocks were up from the previous year as improved weather conditions in 2014 led to larger production totals in many States. However, the eastern third of the Nation saw declines in stocks levels in a number of States. Notable declines occurred in the Northeast where winter conditions persisted into early April requiring additional supplemental feeding.
